nodeck Case

Pitch Deck

Presented by :
Team 9 - Adam, Arina, Athish, Sakhob

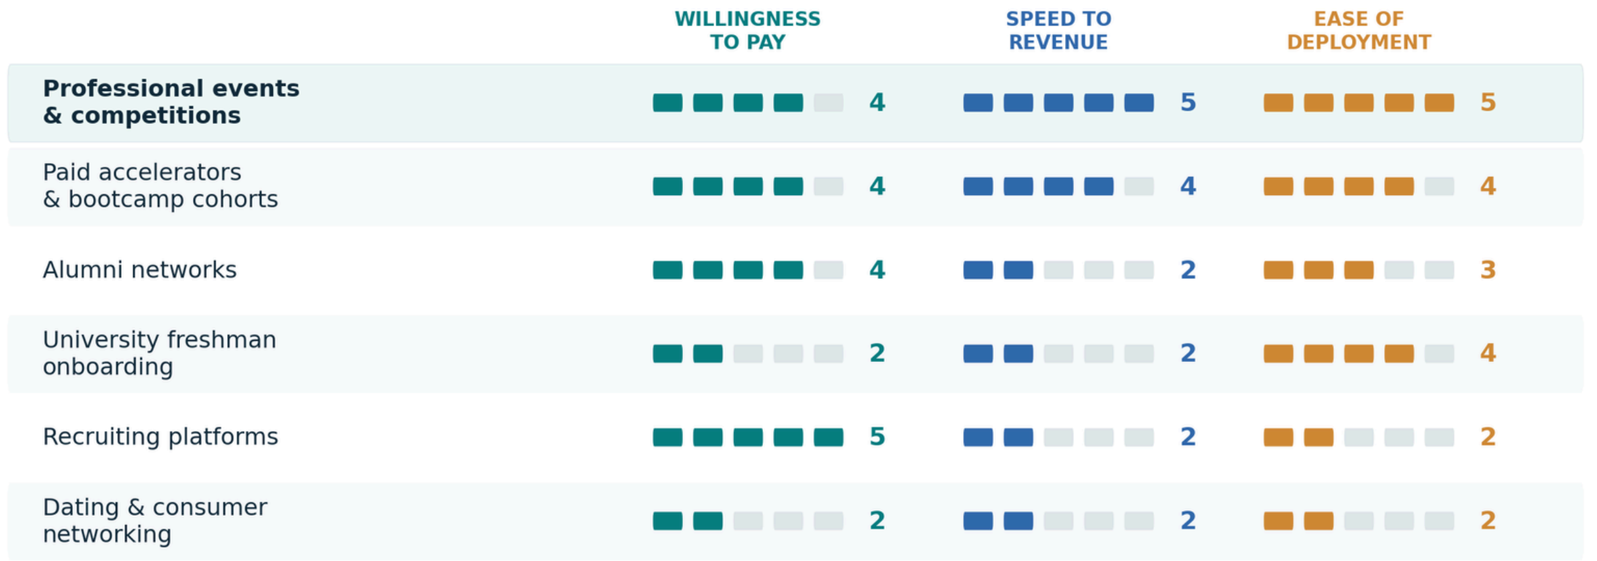

Central Problem

How can nodeck become the standard matching infrastructure for universities, communities, and digital platforms worldwide, while building a recognizable brand, attracting customers, and generating revenue with a very small team and limited capital?

Q1 - Wedge

Where should nodeck enter first?

Three commercial attractiveness criteria · scores from 1 (low) to 5 (high)

Q1 - Wedge

Commercial - Event Example Prices

Comparable event / program	Published commercial price	What it indicates
Hochschule Mittweida Career Day	€300–€800 / exhibitor	Exhibitor access is monetized
Hackathon Fulda 2026	€749–€2,499 / sponsor	Sponsors fund university-linked events
European Semantic Web Conference	€1,000–€7,500 / sponsor	Academic events sell sponsorship tiers
Graphene 2026 conference	€2,000–€12,000 / sponsor	Industry conferences monetize visibility

Q2 - Positioning

“The Smart Layer under your Community

Positioning	Strength	Trade-off
The Stripe of discovery	Clear API analogy for developers and investors	Abstract for organizers and students
The smart layer under your community	Explains direct value to paying organizers	Less emotional; risk of seeming like a small app
Meet the right people, not more people	Memorable promise for students and viral reach	Does not explain the infrastructure product

To Organizers:
“Turn a room of strangers into real connections in 4 hours, and see who actually met.”

To Developers:
“Ship intent matching with reasons and consent in a week, not six months.”

To Students:
“Write one sentence, meet three people worth meeting. Nothing is shared until both say yes.”

‘Stripe of discovery’ stays **developer language**. A consumer brand would cost money we don’t have.

Combine a clear B2B technology proposition with an emotionally engaging consumer message.

Q3 - Competition

The biggest threat is not Series. It is “Good Enough” add-on epidemic

- **Most Dangerous in 24 months:**

Campus apps and event suites adding “good enough” LLM matching themselves.

- **If Series or Boardy opens an API:**

Win on neutrality, EU privacy and procurement readiness, outcome dashboards and integration depth. Price-match pilots for at-risk partners.

Competitor / substitute	Current proposition	Implication for nodeck
Brella	AI matchmaking, meetings, event integrations	Strong direct competitor in event networking
Swapcard	AI recommendations, sponsor analytics and controls	Already offers several target outcomes
Grip	AI event meetings, matchmaking and lead generation	Incumbent organizer relationships and scale
Eventee	Accessible event-management app with networking	Caps standalone matchmaking willingness to pay
Series / Boardy	AI-assisted consumer networking	Potential threat if they sell infrastructure
Forms, directories and chat tools	Low-cost, familiar workarounds	Most important substitute for budget buyers

Q4 - MOAT

Does nodeck need network effects?

- Nodeck does not need a large global social network before providing value
- A university or event organizer brings a group of participants, and nodeck matches people within that group
- **The strongest moat is operational integration plus demonstrated results**

Potential moat	Defensibility	Recommended action
Basic AI matching algorithm	Low	Do not rely on this alone
Matching-outcome data	Medium; subject to lawful data use	Improve ranking from consented feedback
Deep partner integrations	High once embedded	Prioritize repeat organizers and workflows
Trust, consent and safety	Medium–high if demonstrated	Make privacy and safety a purchasing advantage
Brand and university community	Medium; potentially higher at scale	Build ambassadors and local chapters
Proprietary large language model	Low near-term strategic priority	Avoid training an expensive foundation model

Q5 - Business Model

Free for Students, Paid by Universities & Platforms

Tier	Who	Price (E)	Includes
Free	Students, developers	€0	All end-user features, all privacy controls, sandbox up to 100 activated users/month, “Matching by nodeck” badge
Campus / Community	Uni offices, clubs, cohorts	€250/month, or €200 per event (up to 300 attendees); €0.40 per activated user above 500	Dashboard (accepted / ignored / met), visibility controls
Platform	Embedded, white-label partners	€1,000/month + €0.20 per activated user above 5,000	White label, webhooks, SLA

Q5 - Business Model

Proposed packages

Offer	Proposed price	Included service / intended buyer
Pilot	€490 / event	Up to 250 attendees; QR onboarding, matching, basic report
Pro	€990 / event	Up to 1,000 attendees; advanced matching, dashboard, branding
Annual partner	€2,990 / year	Up to four events; repeat programs and integrations
API / platform	From €500 / month	Usage-limited license for event-platform partners
End users	Free	Students, mentors and attendees opt in voluntarily

Q5 - Business Model

Possible scenarios

Assumption	Conservative	Base	Optimistic
Paying organizers	8	25	55
Paid events per organizer	1	1.5	1.7
Average realized event price (€)	650	790	890
Paid API partners	0	2	5
Average paid months per API partner	0	4	6
API monthly fee (€)	500	500	500

Q5 - Business Model

One-year financial outlook - scenario estimates

Metric	Conservative	Base	Optimistic
Revenue (€)	5200	33625	98215
Direct delivery costs (€)	1040	5675	15155
Gross profit (€)	4160	27950	83060
Gross margin	80.0%	83.1%	84.6%
Fixed operating expenses (€)	75000	75000	75000
Operating result (€)	-70840	-47050	8060

Q6 - Partners

Our key future partners

Universities
Incoming students find peers, housing and visa help before arrival, and uni has better community.

Event / competition organizer
Attendees meet the right people in the first 10 minutes. First event free.

60 targeted outreaches → 15 calls → 8 pilot proposals → 4–5 signed

Q7 - Global expansion

The path from 3 to 100, region by region

Phase / timeframe	Campus goal	Region	Primary move
Phase 1 · months 0–6	3–5	Budapest, Vienna, Munich / Heilbronn	Prove paid events and implementation playbook
Phase 2 · months 6–12	15	DACH + Central Europe	Campus organizers and student associations; localize
Phase 3 · months 12–18	40	Wider Europe	Self-service setup and reusable integrations
Phase 4 · months 18–24	100	Europe first; selected global channels	Expand only if unit economics and adoption hold

Q7 - Global expansion

Challenges along the way

	Phase 1	Phase 2-3	Phase 4
Product	Cohort and event templates, QR/link onboarding, dashboard v1	Self-serve setup, university login (SSO), moderation tools	WhatsApp-first channel, white label, partner portal
Language	English + German	+ Czech, Polish, Hungarian (type intent in your language)	+ Hindi and others, multilingual embeddings
Legal	GDPR from day 1: DPA, DPIA template, EU hosting, 18+ gate, LLM provider listed as subprocessor	Local-language terms, procurement-ready pack	India's DPDP Act, US FERPA, Gulf data residency (verify with a lawyer)
Partnerships	International offices, student orgs	ESN-type networks, student unions, alliances	Exchange networks, Indian university network, regional leads on commission

Q8 - THE MOVEMENT

Nodeck Community and Staying Human

Connectors Role:

1-2 student ambassadors on every campus.

Chapter Leads:

Run nodeck Nights for their club.

Builders:

Developers building integrations.

Mentors:

Alumni who give back.

Rituals:

nodeck Night in week 1 of every semester · The Empty Chair at career fairs · annual Connector Summit.

Rewards:

Certificate and references · early access · Summit trip · 10% of year-one revenue from institutions a Connector brings in.

Staying human: a reason with every match, real stories over vanity metrics, founders who reply personally, a public Consent Charter.

Q9 - VIRAL CAMPAIGN

Three strangers: The campaign that spreads without spying

Mechanics:

Result card · invite loop · “run this for your club” button.

Assets:

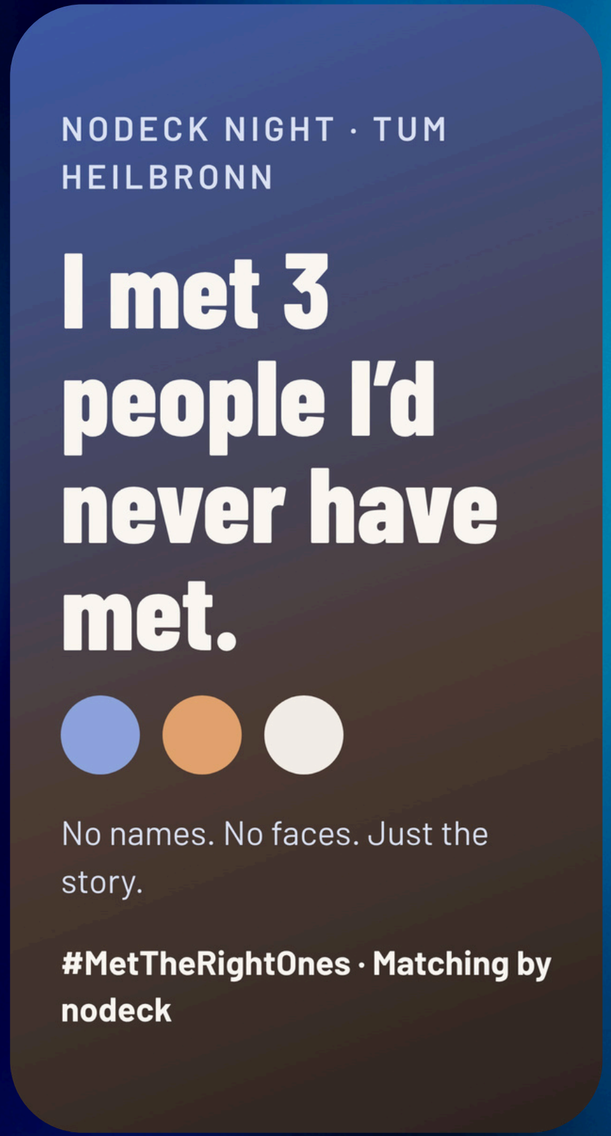

Card template, 30-sec reel, Open Orientation Pack, QR posters.

Channels:

ESN, student unions, case-competition circuit, club Discords, Instagram, LinkedIn.

Budget:

≈ €5,000 per semester: rewards, Summit, boosts, print .

K ≈ 0.38

1.5 invites per user × 25% conversion (estimate). Every 100 users bring about 38 more. No contact-list mining.

Q10 - Group

Win in order, not inorder

Priority: Cohorts → Freshmen → Communities → Alumni.

MVP: Slack bot for bootcamps, MBA and exchange cohorts (30–300 people, 6–16 weeks). Members opt in, get weekly pair/trio introductions plus on-demand /nodeck requests. Admin sees aggregate stats only.

Revenue: The program pays, never students: about €10–15 per participant per cohort (€500 minimum). Free pilots, then annual contracts and upsell to Freshmen and Alumni.

Consent: No public tagging; GDPR-compliant; data deleted after the cohort.

Safety: Block and report in every introduction.

Q11 - Risk and metrics

Risk with reward

North star: meaningful connections/week

Metrics: opt-in 50% · accept 60% · meet 40% · retention 50% · renewal 60%

Milestones

- 6 mo: 5 pilots, 3 paying, 1k members
- 12 mo: 20 programs, 3 universities, €60k ARR
- 24 mo: 80 programs, 10 universities, €400k ARR

Risks → mitigation

- GDPR → EU hosting, AVV, data deleted after cohort
- Minors → 18+ only; under-18s no 1:1
- Harassment → double opt-in, block/report, bans
- Fatigue → 1 intro/week, no repeats
- No renewals → low price, outcome reports

Pivot if: meet <25% or renewal <30% after 12 mo

Q12 - Your big idea

Sponsor-Funded Networking

Corporate event sponsors who want more meaningful engagement with participants.

Flow of value	Illustrative amount (€)	How the customer benefits
Corporate sponsor buys networking package	2000	Association with better participant connections
nodeck receives 60%	1200	Software delivery and matching service
Organizer receives 40%	800	Incremental event income
Attendees pay	0	Opt-in matching and introductions

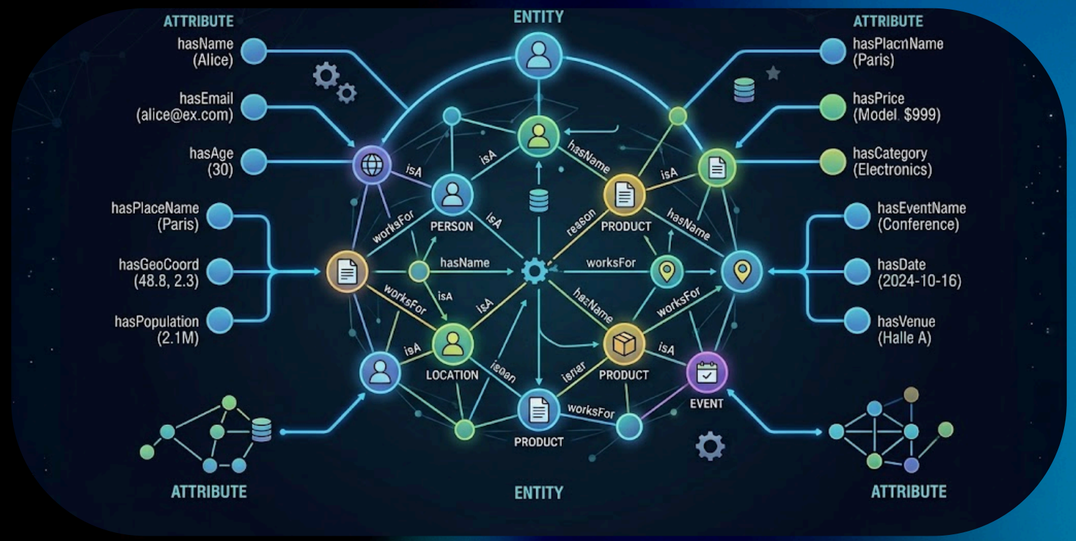

Q12 - Your big idea

Sponsor-Funded Networking

Technology

Technology

The use of LLM to match the network is a great idea, but the question is can we do it in lower cost.

01

Semantic Web

To harness sematic web technologies to find the entities(Person) to the attributes(Hobbies) to have a good match without the cost of llm.

02

Exisiting stack

The llm return response but also hallucinates so to use it in a way if there is no match to get return value as 0 or match when new connection arrives.

Final Recommendation

Strategic recommendation and roadmap

Win the Niche. Prove the Value. Scale the Infrastructure.

Horizon	Strategic priority	Success indicator
Now	Paid event pilots	First paying customers
6 months	Recurring B2B partnerships	3–5 live partners
12 months	Standardized product and integrations	25 paying organizers in base scenario
24 months	Platform-led international growth	100 activated campuses as a stretch target

Conclusion

Nodeck's opportunity is not to build another networking app. It is to become the trusted matching infrastructure behind existing communities and platforms—starting where customers already have a reason to pay.

Thank You

Nodeck Presentation

Big Thanks!
